

Steps to upgrade the firmware of V-R9 Router

1. Download << V-R9_R2.03o0_Firmware_26_Dec_2011.BIN >> from Support link.
2. Power On the Router
3. Connect the Charger- (Charger should be connected during the upgrade)
4. Connect Router with LAN cable or through Wi-Fi.
5. Open a web-browser.
6. Type in the IP Address (<http://192.168.123.254>) and enter the password as “admin”.
7. **Advanced Setup > Tool Box > Firmware Upgrade**
8. Browse << V-R9_R2.03o0_Firmware_26_Dec_2011.BIN >> and press upgrade button.

The screenshot displays the web interface of a WiFi Mobile Broadband Gateway (R0.02a0). The main navigation bar includes 'ADMINISTRATOR's MAIN MENU', 'Status', 'Wizard', 'Advanced', and 'Logout'. Below this, a secondary menu features 'BASIC SETTING', 'FORWARDING RULES', 'SECURITY SETTING', 'ADVANCED SETTING', and 'TOOLBOX'. The left sidebar lists various system functions: System Info, Firmware Upgrade, Backup Setting, Reset to Default, Reboot, and Miscellaneous. The central content area is titled 'Firmware Upgrade' and contains a 'Firmware Filename' input field with a 'Browse...' button. Below the input field, it states 'Current firmware version is R0.02a0'. A note advises: 'Note! Do not interrupt the process or power off the unit when it is being upgraded. When the process is done successfully, the unit will be restarted automatically.' There is an unchecked checkbox for 'Accept unofficial firmware.' and two buttons at the bottom: 'Upgrade' and 'Cancel'.
